Experience

Greenhorn Wellness Pvt. Ltd. (Eloelo Group)
Feb 2024 – Present

Software Engineer I (Backend) — *Bengaluru, Karnataka*

Dolphin — AI media-generation platform *Python, FastAPI, LangGraph, Java 21, Spring Boot, Kafka, MongoDB, PostgreSQL*

- Designed and built **Pilot**, a production **LangGraph AI chat agent**, as primary author from the first commit: plans and dispatches video, image and audio generation from chat across **25+ generation models and 6+ AI vendors**, with the agent itself running on **Bedrock, Claude, Gemini and OpenAI**.
- Modelled the agent as a **plan** → **confirm** → **execute state machine** with **DB-as-state** (no in-memory checkpointer), making it **crash-resilient and horizontally scalable**; hybrid rule + LLM intent routing cuts cost.
- Built **Auto Mode**, a tiered, capability-aware **model-selection engine** (never-failing rule chain, learned/bandit tiers behind feature flags) with a hand-built **Hinglish language classifier** at zero extra API cost.
- Led the design of the **credit estimation and billing flow**: debits only on user confirmation, **idempotent per-attempt debits** with a hard 5-attempt retry cap, and refund on failure.
- Replaced hardcoded per-model maps with a **DB-driven reference-capability model** across a **Java gateway** and **Python SQS worker**, routing generation across **6+ AI vendor SDKs** with the gateway as the single source of truth.
- Drove infra and security hardening: a vendor-offload cut worker task memory from **12 GB to 4 GB**, plus a central **SSRF guard** on all user-URL fetches (metadata/private IPs, redirect-rebind).

StoryTv — OTT / short-video streaming *Java 21, Spring Boot, Redis, PostgreSQL, AWS SQS, Kafka*

- Hardened the high-traffic **content-feed service** as primary author of its core serving logic: async like/bookmark writes via **SQS**, a **Redis reader/writer split** replacing a Lambda read/write path, and request-timeout hardening.
- Built the **A/B experimentation backend** as top author of a standalone microservice: conclude/fetch/validate APIs and a scheduling/reload mechanism powering **cohort- and version-gated rollouts** across the OTT apps.

Eloelo — live social and audio-room app *Java, Spring Boot, MongoDB, Redis, Kafka, MQTT*

- Built a **Discord-like community server** with real-time messaging for **300K+ members per channel** over **MQTT** and **Kafka**, driving **40% higher engagement**; an unread-messages store removed costly MongoDB aggregations.
- Built **Queen & King Mode**, a live audio-room game with timed competitions and real-time leaderboards on **Redis Sorted Sets, Pub/Sub and Kafka**, increasing **average audio-room session duration by 70%+**.

Personal Project

Snappeats | *Java 21, Spring Boot 3.4, Spring Cloud Gateway, PostgreSQL, AWS ECS/Fargate, Terraform* **Google Play**

- Architected and shipped solo a **meal-subscription and delivery platform** live on Google Play: **5 Spring Boot services** behind a **Spring Cloud Gateway** (single JWT validation point) serving customer, rider and admin apps.
- Engineered a **wallet-backed daily-order pipeline** (hold on order, capture on delivery, idempotent order generation) and **Razorpay** card/UPI payments with HMAC-verified webhooks.
- Built the rider backend: fail-closed **Aadhaar eKYC** and bank verification gating automated 7-day payouts, plus a **geo-clustering auto-assignment algorithm** balancing orders across riders.
- Owned infra and delivery: **Terraform**-defined AWS (ECS Fargate, ALB, RDS, EventBridge, Lambda) with **GitHub Actions** CI/CD to ECR and rolling ECS deploys, gated by ∼**780 JUnit 5 + Mockito tests**.

Technical Skills

Languages: Java, Python, SQL
AI / LLM: LangGraph, Amazon Bedrock, Claude, Gemini, OpenAI, multi-LLM orchestration
Backend: Spring Boot, Spring Cloud Gateway, FastAPI, Django, Hibernate/JPA, Kafka, MQTT, WebSockets, AWS SQS
Data & Cloud: PostgreSQL, MongoDB, Redis, AWS (ECS, Lambda, S3, RDS, ElastiCache for Redis/Valkey, CloudWatch), OpenTelemetry, Docker, Terraform, GitHub Actions

Education

Government Engineering College, Aurangabad, Bihar
2019 – 2023

Bachelor of Technology — *Aurangabad, Bihar*
